

About PortionPro Rx™

The PortionPro Rx pet feeding system is the only veterinary-grade device available exclusively through veterinarians that accurately dispenses timed, portion-controlled food for a specified pet while preventing access by all other pets. Built with proprietary Pet Field Communication™ (PFC) pet identification technology, the PortionPro Rx is designed to help reverse and prevent pet obesity, feed prescription and therapeutic diets, and reduce the stress and frustration associated with mealtime in multi-pet homes. It can help improve pet parent compliance with veterinarian feeding protocols and diet recommendations.

The PortionPro Rx is made for both dogs and cats. Proper portion sizes, frequency, and first meal delivery time are easily programmed by the pet owner in less than 60 seconds. Pets acclimate quickly to the device, which is built with food-grade plastic and ceramic parts, operates with low-voltage power, and is designed with safety in mind for pets and family members.

The PortionPro Rx is prescribed by a veterinarian and is direct-shipped to the pet owner's home by VetSource, a home-delivery service supporting the veterinary profession.
